

## Product End of Life Notice: SPI1 and SDL1

Release Date: July 14, 2021

Dear Customers and Partners,

MOBILTEX intends to cease sales of the SPI1 interrupter, the accessory SDL1 datalogger, and associated relays. The last day that these devices will be available for purchase is December 31, 2021. Service and repair will remain active on SPI1s and SDL1s until parts can no longer be reasonably sourced. A minimum term of 5 years of service will be provided, up until December 31, 2026.

Rest assured that we have newer products that replace the features on the SPI1 and SDL1 products that you have come to rely on over the years. Here are our recommended products by application area:

**Portable Interruption:** The new CorTalk Pi-1 pocket interrupter provides a battery-powered portable interrupter. This product will be available for purchase July 22, 2021 - please contact your MOBILTEX sales manager or one of our distribution partners for details.

**Permanent Interruption:** Permanent interruption of rectifiers is best done with a CorTalk RMU3 remote monitoring and control device. Interruption scheduling is available via the cloud-based CorView platform. Alternatively, the uGI1B/S device can be permanently installed within rectifier cabinets.

**Data Logging:** The uDL1 Advanced product is best suited to replace the functionality of the SDL1. For users that automate data flow into PCS, we are creating a bridging application that takes care of this. Please note that to replicate the data from a SDL1, uDL1A products should always be used in 'Interruption Tracking Mode'.

Please contact us if you have any questions on the end-of-life process for the SPI1 and SDL1 products.

We thank you for your continued support.

Kind regards,

Will Maize, P.Eng.

Director of Product Management & Corporate Strategy
